Understanding Earthquakes and Tsunamis

What Are Earthquakes?

Earthquakes are sudden shaking of the ground caused by the movement of tectonic plates beneath the Earth's surface. These seismic events can vary in magnitude from minor tremors to catastrophic quakes causing widespread destruction.

Key points about earthquakes:

- Typically caused by plate tectonics, volcanic activity, or human activities.
- Measured using the Richter scale or moment magnitude scale (Mw).
- Can occur anywhere but are most common along fault lines.

What Are Tsunamis?

Tsunamis are large ocean waves generated primarily by undersea earthquakes, though they can also result from volcanic eruptions, landslides, or meteorite impacts.

Important facts about tsunamis:

- Often triggered by seismic activity beneath the ocean.
- Waves can reach heights of over 30 meters and travel at speeds up to 800 km/h.
- Pose significant risks to coastal communities.

The Connection Between Earthquakes and Tsunamis

Most tsunamis are directly linked to undersea earthquakes that displace large volumes of water. The severity of a tsunami depends on the earthquake's magnitude, depth, and location.

Sequence of events:

- Undersea earthquake occurs.
- Seafloor shifts, displacing water.
- Waves propagate outward as tsunami.
- Coastal areas are affected depending on proximity and topography.
