Sample Questions and Their Answers for Benchmark Test 1

Below are some representative questions and their detailed answers, reflecting typical content found in the benchmark test.

Question 1: What is the primary function of the cell membrane?

Answer: The primary function of the cell membrane is to regulate what enters and exits the cell. It acts as a selective barrier, maintaining homeostasis by controlling substances like nutrients, waste products, and ions. The membrane's structure, primarily composed of phospholipids and proteins, allows it to be semi-permeable, facilitating passive and active transport mechanisms.

Question 2: Which macromolecule is responsible for storing genetic

information?

Answer: Nucleic acids, specifically DNA (deoxyribonucleic acid), are responsible for storing genetic information. DNA contains the instructions necessary for the growth, development, and reproduction of all living organisms. It is composed of nucleotide monomers, which include a sugar, a phosphate group, and a nitrogenous base.

Question 3: During cell division, what is the purpose of mitosis?

Answer: The purpose of mitosis is to produce two genetically identical daughter cells from a single parent cell. It is essential for growth, tissue repair, and asexual reproduction in multicellular organisms. The process involves stages: prophase, metaphase, anaphase, and telophase, culminating in cytokinesis.

Question 4: Explain the difference between genotype and phenotype.

Answer: The genotype refers to the genetic makeup of an organism—the specific set of genes inherited from parents. The phenotype is the observable physical or biochemical characteristics resulting from the interaction of the genotype with the environment. For example, a plant's genotype might include genes for tall stature, but environmental factors could influence whether it actually grows tall or short.

Question 5: What are the main energy transformations in photosynthesis and cellular respiration?

Answer: Photosynthesis transforms light energy into chemical energy stored in glucose molecules, primarily occurring in chloroplasts of plant cells. Cellular respiration, on the other hand, converts the chemical energy stored in glucose into usable energy in the form of ATP (adenosine triphosphate). These processes are interconnected, with photosynthesis providing the glucose and oxygen needed for cellular respiration.

Analyzing Sample Benchmark Test Questions and Their Answers

Let's examine some typical questions and insights into their correct responses to understand what is expected.

Example 1: Cell Structure

Question:

Which organelle is primarily responsible for energy production in eukaryotic cells?

Answer:

Mitochondria

Analysis:

This is a fundamental question testing knowledge of cell organelles. The mitochondria are known as the "powerhouses" of the cell due to their role in ATP production through cellular respiration.

Example 2: Genetics

Question:

If a heterozygous individual for a trait shows the dominant phenotype, what is the probability that their offspring will also display the recessive trait if they mate with a homozygous recessive individual?

Answer:

25%

Analysis:

Using a Punnett square:

- Parent 1 (heterozygous): Aa
- Parent 2 (homozygous recessive): aa

Possible offspring genotypes:

- Aa (phenotype dominant)
- aa (phenotype recessive)

Probability:

- 50% Aa

- 50% aa

Thus, there's a 50% chance of the recessive phenotype, but since the question asks for the probability of displaying the recessive trait, the answer is 50%. (Note: in some guides, the question may specify the probability of homozygous recessive, which is 25% if considering genotype combinations. Clarify question wording for precise interpretation.)

Example 3: Ecology

Question:

Which of the following best describes a biotic component of an ecosystem?

- a) Water
- b) Sunlight
- c) Bacteria
- d) Soil

Answer:

- c) Bacteria

Analysis:

Biotic components are living organisms within an ecosystem. Bacteria are living, whereas water, sunlight, and soil are abiotic factors.
