Detailed Analysis of Sample Questions from the 2013 Exam

Let's examine typical questions that appeared in the June 2013 exam, highlighting what examiners look for and how to approach these questions.

Sample Question 1: Cell Structure and Function

Describe the structure and function of the mitochondria in a cell.

Approach:

- Mention the double membrane structure with cristae.
- Highlight its role in ATP production via cellular respiration.
- Emphasize its importance as the "powerhouse" of the cell.

Expected Answer:

> Mitochondria are double-membraned organelles with an outer membrane and inner membrane folded into cristae. They contain their own DNA and are involved in cellular respiration, where they convert nutrients into energy (ATP). This energy powers various cellular activities, making mitochondria essential for cell survival.

Sample Question 2: Genetics

In a certain plant species, the allele for tall height (T) is dominant over the allele for dwarf height (t). If two heterozygous tall plants are crossed, what is the probability that their offspring will be dwarf? Show your working.

Approach:

- Use a Punnett square.
- Cross Tt x Tt.
- Identify the genotypic ratio.
- Calculate probability of tt (dwarf).

Solution:

| T | t |

|----|---|---

| T | TT | Tt |

| t | Tt | tt |

- Genotypic ratio: 1 TT : 2 Tt : 1 tt.
- Probability of dwarf (tt): 1/4 or 25%.

Sample Question 3: Ecology

Explain how energy flows through an ecosystem, starting from producers.

Approach:

- Describe how producers (plants) convert sunlight into chemical energy via photosynthesis.
- Explain how herbivores (primary consumers) eat plants.
- Detail how energy is transferred through carnivores and decomposers.
- Mention energy loss at each level via heat.

Expected Answer:

> In an ecosystem, energy flow begins with producers, such as plants, which harness sunlight to produce food through photosynthesis. Primary consumers, like herbivores, then eat these plants, obtaining energy. This energy is transferred to secondary and tertiary consumers as carnivores feed on herbivores. Decomposers break down dead organic matter, recycling nutrients. At each step, some energy is lost as heat, so energy transfer is inefficient, and only a fraction reaches higher trophic levels.

Tips for Success on the Day of the Exam

- Time Management: Allocate time proportionally to each section based on marks.
- Read Questions Carefully: Ensure you understand what is being asked before answering.
- Answer Structurally: Use clear paragraphs and bullet points where appropriate.
- Review Your Work: Leave time to check answers for errors or omissions.
