Understanding Dawn: The Scientific Perspective

What Is Dawn?

Dawn is the period of twilight that occurs just before sunrise, characterized by the gradual illumination of the sky. It marks the transition from night to day and is divided into stages based on the position of the sun relative to the horizon:

- **Civil Dawn:** When the sun is between 6° and 0° below the horizon, enough light is present for most outdoor activities without artificial lighting.
- **Nautical Dawn:** When the sun is between 12° and 6° below the horizon, making navigation possible using visible horizon lines.
- **Astronomical Dawn:** When the sun is between 18° and 12° below the horizon, the sky becomes dark enough for astronomers to observe celestial objects without interference.

Dawn begins with the first appearance of light (civil dawn) and progresses through these stages until the sun crosses the horizon, officially marking sunrise.

The Science Behind Dawn

The phenomenon of dawn results from the Earth's rotation and the scattering of sunlight in the atmosphere.
