Welder Qualification

AWS D1.6 mandates that welders must be qualified through tests that demonstrate their ability to produce sound welds in accordance with the WPS. The qualification process involves:

- Performing test welds in a controlled environment
- Subjecting welds to visual inspection and non-destructive testing (NDT)
- Maintaining records of qualification

Qualified welders ensure consistent quality and compliance with the code's requirements.

Inspection and Testing

Quality assurance is integral to AWS D1.6, which specifies various inspection methods, including:

- Visual Inspection: Checking for surface defects, alignment, and geometric accuracy

- Non-Destructive Testing (NDT):
 - Radiographic Testing (RT)
 - Ultrasonic Testing (UT)
 - Liquid Penetrant Testing (LPT)

- **Filler Metals:** Must meet AWS A5.9 specifications, with classifications such as ER308, ER316, ER347, etc., matching the base material and service environment.
- **Shielding Gases:** Typically argon or argon-based mixtures for GTAW and GMAW processes, providing inert atmospheres to prevent oxidation.

Post-Weld Treatments

Post-weld procedures may include:

- Peening to relieve residual stresses
- Heat treatments like solution annealing for certain stainless steels
- Passivation to restore corrosion resistance by removing surface contaminants
- Surface finishing such as grinding or polishing for aesthetic or functional purposes

Benefits of Complying with AWS D1.6 for Stainless Steel Structures
